3 NOZZLES INCLUDED

The nozzles can be used on both the inflating port as well as on the deflating port.

1. 7mm nozzle
2. 16mm nozzle
3. Vacuum bag extension nozzle

GRILL, BBQ & FIREPLACE

Follow these 3 steps for best use when you want to light your grill, bbq or fire place

Light the charcoal

Put a piece of paper or wood in the center of your BBQ and put some charcoal around and on top of it. Light the piece of paper or wood on fire and wait until its lighted the charcoals lightly.

Awaken the flames

Turn on your Coolado ePump and point the outlet to the glowing center of your charcoal stack.

To avoid injuries and / or damages to the pump, keep the pump 50 cm (20 inches) from the fire at all times!

Ready the grill in 3-5 minutes

Continue using the Coolado ePump for around 3-5 minutes on your charcoal to get it grill-ready. Thanks to the airflow that the ePump produces will it fast forward the heating process and turn the charcoal red hot.

USEFUL FIRE TIPS

Airflow is important

Don't put the nozzle of the ePump to close to the charcoal . Airflow is important so try to find a spot where two pieces of charcoal meet and ignite that spot.

Let it spread

It is important to try to find a hot spot where two pieces of charcoal meet. Start by lighting a smaller piece, the glow will catch on quicker and spread to bigger pieces.

Use your ears

Best way to get your charcoal or logs going quickly is to continue pointing the ePump towards the same spot in your pile after ignition. Listen for the "swoosh" and you'll know when you point the ePump in the right direction.

There is charcoal and there is charcoal

We recommend to use high quality lump charcoal. This is quite different from the regular charcoal you pick up in your grocery store. The chunks will be bigger, sparks less and a give a more steady cooking temperature.

Briquettes

Briquettes are made from charcoal powder compressed with corn starch making them very dense. If you use briquettes the lighting time will be longer than regular charcoal and will also emit smoke when ignited.

INFLATING / DEFLATING

To inflate:

1. Choose the appropriate nozzle and connect it to the inflating port.
2. Put the nozzle into the inflating devices valve.
3. Switch on the Coolado air pump and start inflating.

To deflate:

1. Choose the appropriate nozzle and connect it to the deflating port.
2. Put the nozzle into the deflating devices valve.
3. Switch on the Coolado air pump and start deflating.

Inflating

Deflating

VACUUM CLOTHING BAG

To use the ePump on a vacuum-bag unscrew the cover of the valve and put the vacuum nozzle on the deflating port of the ePump. Put the nozzle of your ePump on the valve of the vacuum bag and make sure there is no leak. Turn on your ePump and suck all air out of the vacuum bag. The valve will close automatically when you're done. Screw back the top and you're all set! Your clothing is minimized in volume and protected against moisture, dirt and smells.

STORING YOUR E-PUMP

You should always store your ePump inside its protective case, not only to protect it from fall damage, but also to keep all its accessories together.

CHARGING THE E-PUMP

The Coolado E-Pump comes with a standard micro USB cable. In order to save the environment, we don't supply a charger. A standard mobile phone charger could be used (after checking the voltage).

Fully charge the Coolado ePump before the first use.

Connect the Micro USB cable to the USB port of the pump.

Connect the USB cable to the charger.

Plug the charger into the wall socket or the car adapter.

The Pump will show a red light when it is charging.

When the pump is fully charged the light will turn green.

WARRANTY

The Coolado warranty is in accordance with the EU law and regulations

The Coolado airpump has a limited warranty of 24 months after the date of purchase.

1 month money back guarantee (pump must be returned to its original undamaged package)

Damages to the Coolado caused by abuse, abnormal operation, water damage, non- advised power supply, are not included in the warranty.

The liability of Coolado will ALWAYS be limited to the value of the airpump and coolado is not liable for damages to persons and / or property.

⚠️⚠️⚠️ PRECAUTIONS ⚠️⚠️⚠️

Always follow the instructions as stated in this operational manual
Avoid looking into the ports while the Coolado airpump is in operation.
Keep both ports free from obstructions during operation (Pump can become hot!)
Keep the pump away from moisture and water.
